Travel Planning

Family road travel planning differs significantly from both self-guided tours and group tours, as it involves balancing a wide range of individual preferences among family members.

The challenge lies in the complexity of accommodating diverse travel interests and priorities within the family, making it difficult to develop a singular itinerary that satisfies everyone's preferences

★ Design Opportunity

Problem:

Different preferences

How to balance?

Opportunity:

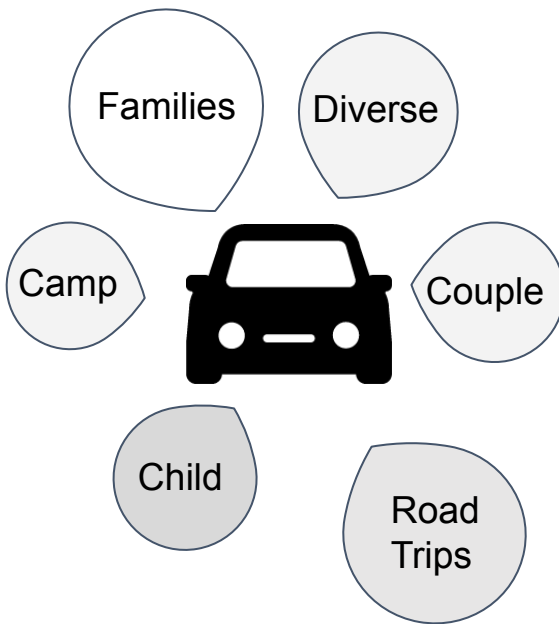

Integrate
multiple user
preferences

an algorithm that
can prioritize
preferences

fuzzy analytic hierarchy process

Audience

High Personalization

Work Plan and Methods

Research Phase

Literature Review:

-Understanding family travel circumstances and the technologies used in planning.

User Research (Due: Sep 6)

-Interviews: 2-3 families per member on travel preferences and planning negotiations.

-Observation: Weiduo Lin observes family planning behaviors.

-Survey: Gather data on travel frequency and challenges.

Design Phase (Due: Sep 11)

Idea Generation:

-Brainstorming session: 3-5 ideas per member.

-Co-design Workshop: Involve families in the design process.

Initial prototype development(Due: Sep 13)

-Wireframes: Low-fidelity layouts of features and pages.

-Interactive Prototypes: Simple models using cardboard.

User Testing & Iteration (Due: Sep 28)

-A/B Testing: Validate concept prototypes.

-High-Fidelity Prototypes: Develop using Figma/Arduino, and test with 4 families.

Final Prototype: Deliver the validated final concept prototype.
